Alluna Ritchey-Chrétien telescopes

Alluna Optics, Dr.-Jaufmann-Strasse 18, Germany 86399 Bobingen,
eMail: info@alluna-optics.de , Web: www.alluna-optics.com

Alluna *optics* Ritchey-Chrétien Telescopes are professional telescopes of high “Made in Germany” quality. Ideal for observatories, schools, education, research and in particular for astrophotography.

The telescopes are available in standard sizes 16“, 18“, 20“, 22“ & 24 inches.

All telescopes can be used as a f/8,0 system or with a reducer as a f/6,0 system.

For highly accurate precision optics, optionally made of Zerodur glass ceramic, only optics exclusively of our manufacturing are used. It is only in this way that we can guarantee a consistently high quality of all our telescope optics.

The aluminium carbon truss tube, an elaborate honeycomb structure, is manufactured from solid aluminium. With this, an extremely high stability, torsion resistance and collimation is achieved. Instrument loads of greater than 50 kg can be implemented.

The integrated Telescope-Control-System (TCS2) controls all the basic functions of the main telescope:

- High precision secondary mirror focusing of the optic. Focus accuracy 0,0019 mm.
- Cooling of the optical tube. Three fans, real-time temperature query of the main mirror, secondary mirror and ambience.
- Control of the DustCover
Four-fold flaps, opening time 6-12 seconds depending on the telescope size
- Instrument rotator
Positional accuracy 0,01 degree
Maximum speed of approximately 4,9 °/sec
- Mirror heater
- Ascom connection

The control can be carried out via Notebook/PC, autonomously via the touch screen hand controller or remotely.

With the “Application Programming Interface” contained in the delivery, you can integrate the functionality into your own applications.
